

PUSHPENDRA BAHADUR PRAJAPATI

Application Security Engineering Intern Candidate | Python • Software Engineering • ML/AI Systems
Indore, India • +91-7828964569 • pushpendraprajapati12056@gmail.com • LinkedIn

PROFESSIONAL SUMMARY

Computer Science engineer (B.Tech, CGPA 8.9/10; currently pursuing M.Tech at DAVV University) with hands-on software engineering experience building and deploying production-style Python systems — REST APIs, containerized services, and end-to-end ML/AI pipelines. Experienced across the full development lifecycle: design, coding, testing, debugging, and documentation, using Git-based workflows and Agile/Scrum practices. Comfortable working with CI/CD-adjacent tooling (Docker, FastAPI, cloud deployment on AWS) and automating repetitive engineering tasks. Strong communicator with a track record of mentoring 100+ students in Data Structures, Algorithms, and Python. Eager to bring this engineering foundation and self-starter mindset to application security, learning secure SDLC practices and vulnerability triage.

TECHNICAL SKILLS

Programming: Python (Advanced), C++, Java, Bash/Shell, REST APIs

Engineering & Deployment: Git, Docker, FastAPI, Flask, Streamlit, Agile/Scrum, Jupyter, VS Code

Data & Systems: SQL, MySQL, Pandas, NumPy, ETL pipelines, vector databases (FAISS, ChromaDB), semantic search

ML/AI Foundation: TensorFlow, PyTorch, Scikit-learn, Hugging Face Transformers, LLMs, RAG pipelines, prompt engineering

Cloud/Infra: AWS (EC2, S3), Google Colab, CUDA/GPU-accelerated workloads

Familiarity to build on: Kubernetes/container orchestration, microservices architecture, application security tooling and secure SDLC frameworks

PROFESSIONAL EXPERIENCE

Generative AI Engineer (Training) | Mind Coder Pvt. Limited

2024 – Present

Indore, India

- Built and deployed end-to-end Python applications using LLMs, LangChain, and REST APIs — covering the full build-test-deploy cycle expected in production software engineering.
- Developed RAG pipelines integrating vector databases (FAISS, ChromaDB), applying the same data-flow and integration debugging skills used to trace and triage application vulnerabilities.
- Deployed APIs using FastAPI and integrated with frontend applications via REST endpoints, working within containerized (Docker) environments.
- Fine-tuned models on domain-specific datasets, iterating methodically on technical solutions — a structured problem-solving approach transferable to security tooling and automation.
- Built conversational AI agents with multi-step reasoning and tool use, requiring careful attention to system behavior, edge cases, and failure modes.

Teaching Assistant | Coding Ninjas

2024 – Present

Remote

- Mentored 100+ students in Data Structures, Algorithms, and Python programming, strengthening the ability to explain technical concepts clearly to cross-functional stakeholders.
- Reviewed assignments and provided structured feedback, developing an eye for code quality and common implementation errors — a habit directly relevant to spotting security-relevant code issues.
- Assisted in curriculum design for Python and ML modules, aligning content with industry standards and documentation practices.

KEY PROJECTS

LLM-Powered RAG Chatbot | Python, LangChain, OpenAI GPT-4, FAISS, FastAPI

- Built a Retrieval-Augmented Generation chatbot answering queries from custom document corpora with 95%+ relevance accuracy.
- Integrated FAISS vector store for semantic search and deployed as a REST API using FastAPI, reducing hallucination rate by 40% through careful input/output validation — an emphasis on system reliability that mirrors secure coding discipline.

Real-Time Sentiment Analysis Engine | Python, BERT, TF-IDF, Flask, NLP

- Fine-tuned BERT embeddings on product reviews, achieving 91% classification accuracy; deployed as a REST API using Flask.

Image Classification System (CNN) | *Python, TensorFlow, Keras, OpenCV, Transfer Learning*

- Designed multi-class CNN classifier with VGG16/ResNet transfer learning, achieving 94%+ accuracy; GPU-accelerated training cut compute time by 60%.

EDUCATION

M.Tech – Computer Science (Pursuing)

DAVV University, Indore

B.Tech – Computer Science | CGPA: 8.9/10

Vindhya Institute of Technology & Science, Satna

CERTIFICATIONS & ACHIEVEMENTS

- Full Stack Development Certification – Coding Ninjas (2022)
- Project Exhibition Certification – IIT Allahabad (2023)
- CGPA: 8.9/10 – Top academic performer
- GPU-accelerated ML training experience (CUDA, NVIDIA)

ADDITIONAL INFORMATION

- Comfortable collaborating with cross-functional and remote teams across multiple time zones.
- Available for a full-time, 12-week internship; self-starter with strong critical thinking and problem-solving skills.
- Curious and growth-oriented, with genuine interest in transitioning engineering skills toward application security.
